

Key Words

Here is a list of key words, abbreviations, and acronyms. Each term is given with the page on which it appears (in bold) and is explained for the first time. When more than one page is listed, the numbers indicate the main locations in the book where the concept is used.

- acceptor, 370
- activation energy, 79
- allotrope, 49
- alloy, 5
- alloy steel, 269
- alumina, 254
- amorphous, 6
- a.m.u., 3
- anion, 44
- annealing, 132, 159
- APF, 338
- atactic, 329
- atom percent, 234
- atomic force microscopy, 401
- atomic number, 3
- atomic packing factor, 38
- atomic weight, 3
- austenite, 256
- Avogadro's Number N_{Av} , 4
- Avrami equation, 261

- bainite, 266
- bandgap, 357
- band structure, 357
- basal plane, 41
- basis, 46
- BCC, 41
- Binary, 44

- body-centered cubic, 41
- Boltzmann constant, 44, 91
- bond energy, 22
- Bragg's Law, 68
- Bravais lattice, 59
- brittle, 32
- Burgers vector, 98

- carbon nanotube, 412
- capacitance, 377
- capacitor, 376
- carburizing, 181
- cast iron 288
- case hardening, 181
- cation, 44
- cementite, 255
- ceramic, 6, 305
- cladding, 424
- clay, 312
- close-packing, 36
- close-packed, 36
- coarse pearlite, 266
- cold work, 155
- component, 199
- compression, 110
- compressive force, 109
- conduction band, 357
- conductor (electrical), 5

constructive interference, 67
coordination number, 38
copolymer, 330
core (optical fiber), 424
core electrons, 15
covalent bond, 19
covalent bonding, 24
cross-linking, 127, 141
crystal, 33
crystal system, 59
crystalline, 33
cubic close-packed, 36

dendrite, 221
degree of crystallinity, 127
degree of polymerization, 332
destructive interference, 68
Diamond, 49
dielectric, 374
dielectric constant, 378
diffusion, 173
diffusion coefficient, 177
diffusivity, 177
diode, 384
dipole moment, 26
dislocation, 87, 97
dislocation line, 97
donor, 370
dopant, 369
doping, 369
drift velocity, 353
drive-in, 191
ductile, 32
ductility, 5, 113

edge dislocation, 97
elastic deformation, 111
elastic modulus, 111
elastomer, 126
electrical conductivity, 351
electrical polarization, 378
electrical resistance, 351
electrical resistivity, 351
electronegative, 17
electronegativity, 17
electron Volt, 356
electropositive, 17
energy band, 356
engineering strain, 109
engineering stress, 109
epitaxial, 433
equilibrium, 21, 200
eutectic, 243
eutectic line, 243
eutectic microstructure, 248
eutectic point, 243
eutectic system, 243
eutectoid line, 256
eutectoid point, 256
eV, 356
extensive variable, 209

face-centered cubic, 37
Farad, 377
FCC, 37
Fe-C system, 255
feldspar, 312
Fermi energy, 363
Fermi function, 363
ferrite, 256
ferroelectric, 379
ferrous, 255
Fick's first law, 176
Fick's second law, 181
field electron emission, 397

field ion microscopy, 397
fine pearlite, 266
first ionization potential, 16
forward biased, 383
fracture, 144
fracture toughness, 151
free energy, 200

glass, 6, 207, 307
glass transition temperature, 209
glassy, 53
grain, 86
grain boundary, 87, 100
grain growth, 160
graphene, 411
Griffith criterion, 151
ground state, 13
growth, 213
Gum metal, 419

hardness, 115
HCP, 40
HDPE, 336
heat of fusion, 206
heterogeneous nucleation, 217
hexagonal close-packed, 36, 40
high alloy, 283
high-carbon, 284
hole, 366
homogeneous nucleation, 217
homogeneous slip, 135
homopolymer, 339
Hooke's Law, 111
hypereutectoid, 269
hypoeutectoid, 269

immiscible, 360
index of refraction, 423
inelastic deformation, 113
inorganic glass, 6
insulator, 6, 374
intensive variable, 208
interface, 173
intermolecular bonding, 20
interstitial, 87
intramolecular bonding, 20
intrinsic semiconductor, 366
ionic bonding, 25
ionicity, 28
ionic radius, 44
ionization potential, 16
isomer, 330
isomorphous system, 236
isotactic, 329
isotope, 3
isotropic stress, 110

lamellae, 59
lattice, 34
lattice constant, 38
LDPE, 336
lever rule, 241, 246
line defect, 87
linear thermal expansion coefficient,
24
liquidus line, 238
long-range order, 33
low alloy, 283
low-carbon, 284
lower yield point, 122

martensite, 267
medium-carbon, 284

mer, 126
metal, 5
metallic bonding, 25
metallic glass, 424
metastable phase, 200
metastable state, 260
mica, 312
microstructure, 103, 247, 257, 263
Miller indices, 59
miscible, 306
miscibility, 305
mixture, 199
mobility, 353
modulus of elasticity, 111
mole (one), 4
MOSFET transistor, 386

nanocrystalline, 405
nanoscale, 405
nearest neighbor, 37
network modifier, 56
normal conditions, 20
n-type semiconductor, 370
nucleation, 213
nucleus, 213
number average, 332

Ohm's Law, 350
one-phase region, 239
orbital, 14
orthorhombic, 58

partially crystalline, 57
Pauli Principle, 12
pearlite, 257
phase, 199
phase diagram, 201, 234
phase transformation, 259
photodiode, 382
photon, 375
photonic crystal, 428
piezoceramic, 381
piezoelectric, 381
planar density, 61
plain carbon steel, 269, 283
Planck's constant, 375
plastic deformation, 113
platelet, 59
p-n junction, 383
p-type semiconductor, 370
point defect, 89
Poisson ratio, 112
polar, 26
polarization, 378
polycrystalline, 86
polydispersity index, 333
polyester, 326
polyethylene, 57, 326, 336
polymer, 6
polymorph, 50
primary bonding, 24
principal quantum number, 11
proeutectic, 249
proeutectoid, 259
proportional limit, 113

quartz, 50
quench, 265

recovery, 160
recrystallization, 160
refractive index, 423
refractory, 312

resistance, 351
resistivity, 351
resolved shear stress, 134
reverse biased, 384
room temperature, 20
rubber, 143

SC, 47
scanning electron microscopy, 399
screw dislocation, 99
secondary bonding, 24
self-interstitial, 87
semiconductor, 7, 362
semicrystalline, 57
shear, 108
shear stress, 109
shell, 11
short-range order, 53
silica, 51
silicate, 50
silicon, 49
silicon dioxide, 50
simple cubic, 47
simple metal, 5
single crystal, 86
sintering, 161
slag, 315
slip, 135
slip system, 139
solidification, 205
solid solution, 92
solidus line, 238
solubility, 93
solute, 92
solution, 199
solvent, 92
solvus line, 244
specific volume, 208

spherulite, 219
spin, 12
stacking fault, 102
stainless steel, 270, 287
standard conditions, 20
steady state, 178
steel, 92
stoichiometry, 51
strain, 108
strain hardening, 155
strength, 5
strengthening, 153
stress, 108
subshell, 11
substate, 12
substitutional, 87
syndiotactic, 329

temperature coefficient of resistivity,
360
tensile force, 108
tensile strength, 113
tensile test, 108
tension, 110
ternary, 49
thermal equilibrium, 200
thermal expansion coefficient, 24
thermoplastic, 325
thermoset, 325
tie line, 239
toughness, 113
transition metal, 5
triple point, 201
true stress, 109
TTT-diagram, 259, 263
two-phase region, 239

undercooling, 214
uniaxial loading, 110
unit cell, 34
unit vector, 34
universal gas constant, 91
upper yield point, 122

vacancy, 86
valence band, 357
valence electrons, 15
van der Waals bonding, 26
viscosity, 210

weight average, 333
weight percent, 234
work hardening, 155

X-ray diffraction, 66

yielding, 113
yield strength, 113
Young's modulus, 111

Zinblende, 48
